“functions only when in-water!”

In-water-only function...

The SAFELITE II lifejacket flashlight is designed and manufactured to operate automatically/manually only when it comes in contact with water and never when it is dry.

why?

This guarantees protection against unnecessary use and battery loss when the SAFELIGHT II flashlight is not in use, or simply in storage.

○ Water Activated AUTO-ON

The LED flashlight is activated automatically when it comes in contact with water.

○ MANUAL-OFF

While in use, by pressing the ON/OFF button the flashlight will be manually switched-off to save battery.

○ MANUAL-ON

(In-Water function Only)

While switched-off, by pressing the ON/OFF button the flashlight will be manually switched-on.

“Instructions of Use”

Use of Buckle / Installation

Step 1: Remove the buckle from the back side of the SAFELITE II.

Step 2: Insert the buckle under the belt or slot area, with its hook edges facing upwards.

Step 3: Press the SAFELITE II by hand on its buckle until it locks in position.

Upper Belt

If available, the ideal position for foam lifejackets, is the upper belt, since it offers a higher position above sea level.

Inflatable Lifejackets

For inflatable lifejacket installation, open the lifejacket and attach the SAFELITE II to the dedicated flashlight band/slot, as made by the manufacturer. All LALIZAS inflatable lifejackets, offer a special flashlight band to the upper part of the yellow bladder.

Lower Belt

The SAFELITE II is designed to match 20-40mm belts. For lower belt installation, use the belt area next to the belt buckle, to provide easy operational access in case of emergency.
